

Underground Tanks - Plastic

UK Made

Our underground PuraTank range is made in the UK and complies with EU & UK regulations.

Robust

The PuraTank range is manufactured out of Polyethylene and they are moulded using a rotational moulding process which produces a stress-free product, offering the best quality possible.

Curved Design

This design allows for more efficiency when using submersible pumps. It enables all the water, even from the bottom of the tank to be pumped out.

Easy to Install

Because of a high strength, ribbed design, each of these tanks can be backfilled using pea-gravel. This eliminates the high costs and difficulties of encasing a tank in concrete. The shallow dig depth also makes them far easier to install than other options.

10 Year Warranty

Our PuraTank range comes with an industry leading 10 year warranty. These tanks are amongst the most dependable in the market, but the warranty offers extra peace of mind for any owners.

Potable & Non Potable

All these underground water tanks come as either Potable or Non Potable. As a result they are ideal for many different applications from machine wash downs to family household needs.
